

ABSTRACT OF THE DISCLOSURE

An exhaust sirocco fan ~~55~~ exhausts the air inside the projector outside. An inlet ~~55A~~ of the exhaust sirocco fan ~~55~~ is disposed along the plane orthogonal to the optical path plane formed by the optical ~~unit 4~~unit, i.e. along the thickness direction of the projector. In other words, the optical ~~unit 4~~unit or the exhaust sirocco fan ~~55~~ need not be disposed in the thickness direction of the projector in an overlapping manner. Therefore, by efficiently sucking the inside air, the exhaust efficiency can be ~~improved~~enhanced and calmness can be ensured in the projector.
